PROFESSIONAL SUMMARY

Computer Science graduate (May 2026) with hands-on experience building full-stack applications in healthcare and AI domains building features using Java, Python, React.js and PostgreSQL. Strong foundation in DSA, Object-Oriented, Operating System and Computer Network with a focus on scalable backend systems, clean API design alongside testing and reliable full-stack development for both product environments and client-driven service projects.

SKILLS

Languages: Java, Python, Javascript, SQL

Frontend / Backend: React.js, Node.js, Django REST Framework, Spring Boot, MVC Architecture

Databases: PostgreSQL, MongoDB, MySQL

DevOps & Tools: Git, GitHub, Docker, AWS, Postman, CI/CD

Core CS: Data Structures & Algorithms, OOP, Computer Networks, Operating Systems

EDUCATION

B.Tech Computer Science & Engineering Medicaps University, Indore
CGPA: 6.98

June 2022- May 2026

Higher Secondary School (Class 12) Lord Buddha Public School, Kota
Percentage: 77.8

June 2020- March 2021

PROJECTS

Healthcare EHR (HCLTech) - github.com/IAMNOOB101/HealthCareEHR

Mar 2026 – Apr 2026

- Engineered a full-stack EHR platform with 3 distinct user portals (patient, doctor, admin) handling patient records, appointments, and clinical documentation in React.js, Java SpringBoot, PostgreSQL architecture.
- Designed and documented a modular RESTful API layer with 20+ endpoints and test cases for patient encounters and medical history optimizing query performance through column indexing and concurrent request handling.
- Architected a role-based access control (RBAC) system with 7 distinct roles across 3 portals using OOP principles, enforcing granular permission boundaries and data isolation across all tiers.
- Built server-side input validation and sanitization pipelines across all API endpoints to prevent malformed data submissions.
- Led a 10-member cross-functional team collaboration as Scrum Master across weekly Agile sprints using JIRA and delivered the complete platform in 3 weeks while personally developing backend API endpoints and database tables.

InterviewAI - github.com/IAMNOOB101/Interview-AI

Dec 2025 – Jan 2026

- Built an AI-driven interview assessment platform using React.js, Django REST Framework (Python), and PostgreSQL, supporting concurrent user sessions, session state management, and structured feedback delivery pipelines.
- Integrated the Google Gemini API with a local Ollama fallback to analyze candidate responses and generate structured evaluation reports. Improved scoring consistency validated across 20 internal test sessions.
- Developed 10+ fault-tolerant RESTful APIs with robust input validation, error handling and concurrent session support. Verified all request flows end-to-end using Postman.
- Managed a 4-member team end-to-end sprint planning, code reviews and integration testing, shipping all core features within a 6-week cycle with zero post-merge regressions.

LEADERSHIP

Technical Lead Esports Club, Medicaps University

Jul 2023 – Dec 2025

- Engineered a live score-tracking and participant management system using Google Sheets API and custom automation scripts, eliminating manual data entry across 10+ events.
- Reduced event coordination overhead by automating bracket generation, score updates, and participant notifications, enabling the club to scale event frequency without additional manpower.
